

D-142: Eversource lies about necessity for the line:

“6. Review of public need and public impact

**In order to meet the reasonable requirements of electric service to the public**, ES proposes to replace existing wood structures with steel structures, replace existing conductors with new conductors, replace static wires with communications fiber optic cables, and maintain a three-phase 115 kV transmission line designated as the D142 Line over and across state owned land in Northumberland and public waters in Lancaster, New Hampshire. This transmission line is an integral part of ES’s electric transmission system in this area.” (emphasis added)
